

Sidmar Press Release – July 28, 2011

Sidmar Mfg, Inc. announces its 4th generation hydrotherapy table. The *RejuvaWave FB100 and FB200* are full-body, dual pump hydromassage tables that incorporates all the quality and reliability that positioned Sidmar as 1st choice for hydrotherapy in over 6,000 healthcare facilities. Sidmar created the “spine only” *RejuvaWave RS10* three years ago to trial and field test its unique, variable-speed, electronic motor control, used in conjunction with their patented, rugged, stainless steel jet system.

RejuvaWave FB100/FB200 offers a powerful massage, while allowing the patient complete control with its easy-to-use, conveniently located, flexible control panel. For example, the patient could lower the massage pressure on the legs while enjoying a vigorous massage on the upper body, or vice versa. The full-body table is much wider than current models and has a powerful, cervical jet, which delivers a deep, penetrating massage. An electronic timer with a memory feature retains your chosen treatment time from patient to patient. An ultra-light nylon barrier keeps the body from hitting the jets, while allowing the patient to rest comfortably on warm water. The barrier also allows spray and wipe cleaning between patients.

Joe Holland, President of Sidmar, says “... the 3-year trial of our first *RejuvaWave RS10* has proven to be a trouble-free and very reliable product that fits well in our existing line.” Like all Sidmar tables, you never have to change the water; therefore, no draining or cleaning is ever required. The full-body table has a built-in grab bar, which makes getting on and off easy. The 110-volt model sells for \$8,499 and provides selectable upper or lower body massages. The 220-volt model allows full body as well as upper and lower massage, simultaneously, for an additional \$500.
